Quarter	-0.03	4.97	3.77	4.77	5.03	3.74

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invescoaim.com for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Had fees not been waived and/or expenses reimbursed currently or in the past, returns would have been lower. Class Y shares have no sales charge; therefore, performance is at NAV. Please note: The fund has been in existence for less than one year; cumulative performance may not be indicative of the fund's long-term performance potential.

About risk

Credit risk is the risk of loss on an investment due to the deterioration of an issuer's financial health. Such a deterioration of financial health may result in a reduction of the credit rating of the issuer's securities and may lead to the issuer's inability to honor its contractual obligations, including making timely payment of interest and principal. The fund is subject to currency/exchange rate risk because it may buy or sell currencies other than the U.S. dollar.

The fund may use enhanced investment techniques such as derivatives. The principal risk of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Derivatives are subject to counterparty risk – the risk that the other party will not complete the transaction with the fund.

Investing in developing countries can add additional risk, such as high rates of inflation or sharply devalued currencies against the U.S. dollar. Transaction costs are often higher, and there may be delays in settlement procedures.

Foreign securities have additional risks, including exchange rate changes, political and economic upheaval, relative lack of information, relatively low market liquidity, and the potential lack of strict financial and accounting controls and standards.

Lower rated securities may be more susceptible to real or perceived adverse economic and competitive industry conditions, and the secondary markets in which lower rated securities are traded may be less liquid than higher grade securities. The loans in which the fund may invest are typically noninvestment-grade and involve a greater risk of default on interest and principal payments and of price changes due to the changes in the credit quality of the issuer.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

Leveraging entails risks such as magnifying changes in the value of the portfolio's securities.

A majority of the fund's assets are likely to be invested in loans and securities that are less liquid than those rated on national exchanges.

There is no guarantee that the investment techniques and risk analysis used by the fund's portfolio managers will produce the desired results.

The prices of securities held by the fund may decline in response to market risks.

Nondiversification increases the risk that the value of the fund's shares may vary more widely, and the fund may be subject to greater investment and credit risk than if it invested more broadly.

Reinvestment risk is the risk that a bond's cash flows will be reinvested at an interest rate below that of the original bond.

The fund may invest in obligations issued by agencies and instrumentalities of the U.S. government that may vary in the level of support they receive from the U.S. government. The U.S. government may choose not to provide financial support to U.S.-government-sponsored agencies or instrumentalities if it is not legally obligated to do so. In this case, if the issuer defaulted, the underlying fund holding securities of such an issuer might not be able to recover its investment from the U.S. government.

The fund may invest in mortgage- and asset-backed securities. These securities are subject to prepayment or call risk, which is the risk that payments from the borrower may be received earlier or later than expected due to changes in the rate at which the underlying loans are prepaid.

Because a large percentage of the fund's assets may be invested in securities of a limited number of companies, each investment has a greater effect on the fund's overall performance and any change in the value of those securities could significantly affect the value of an investment in the fund.

Individually negotiated, or over-the-counter, derivatives are subject to counterparty risk, which is the risk the other party to the contract will not fulfill its contractual obligation to complete the transaction with the fund.

Class Y shares are available only to certain investors. See the prospectus for more information.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

The Barclays Capital U.S. Aggregate Index is an unmanaged index considered representative of the U.S. investment-grade, fixed-rate bond market. An investment cannot be made directly in an index.

Weighted average effective maturity is a measure, as estimated by the fund's portfolio managers, of the length of

Investment Map(s)

The map illustrates areas in which the fund typically invests, not necessarily within a limited period of time. This fund is not classified with regard to one primary bond quality.

Sectors (%)

U.S. Mortgage-Backed Securities	43.05
U.S. Corporate Bonds	33.36
U.S. Government Bonds	20.10
Foreign Corporate Bonds	3.51
U.S. Asset-Backed Securities	1.66
Cash/Other	-1.68

Sectors may not equal 100% due to rounding.

Bond Holding Statistics

Weighted Average Effective Maturity (years)	5.86
Effective Duration	4.38
Average Credit Quality	AA-

30-Day SEC Yields

	% Total
Class A Shares	3.66
Class C Shares	3.10
Class Y Shares	4.10

Had fees not been waived and/or expenses reimbursed, the SEC yield would have been 1.89% for Class A shares, 1.33% for Class C shares and 2.33% for Class Y shares.

Expense Ratios

	% Net	% Total
Class A Shares	0.90	2.67
Class C Shares	1.65	3.42
Class Y Shares	0.65	2.42

Per the current prospectus.

Net = Total annual operating expenses less any contractual fee waivers and/or expense reimbursements by the adviser in effect through at least June 30, 2010. See current prospectus for more information.

time the average security in a bond fund will mature or be redeemed by its issuer. It takes into account mortgage prepayments, puts, adjustable coupons and potential call dates. **Effective duration** is a measure, as estimated by the fund's portfolio managers, of a bond fund's price sensitivity to changes in interest rates. It takes into account mortgage prepayments, puts, adjustable coupons and potential call dates. A credit rating is an assessment provided by a nationally recognized statistical rating organization (NRSRO) of the creditworthiness of an issuer with respect to debt obligations, including specific securities, money market instruments or other debts. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest); ratings are subject to change without notice. NR indicates the debtor was not rated and should not be interpreted as indicating low quality.
