

AIM Growth Allocation Fund

Target risk

Data as of Dec. 31, 2009

Fund Facts

Nasdaq	A: AADAX B: AAE BX C: AADCX Y: AADYX R: AADR X I: AADIX S: AADSX
Total Net Assets	\$445,313,724
Total Number of Holdings	12
Annual Turnover (as of 12/31/08)	16%

Investment Map(s)

The maps illustrate areas in which the fund typically invests, not necessarily within a limited period of time. This fund is not classified with regard to one primary market capitalization or equity style.

Expense Ratios	% Net	% Total
Class A Shares	1.26	1.39
Class C Shares	2.01	2.14
Class Y Shares	1.01	1.14
Class S Shares	1.16	1.29

Per the current prospectus

Net = Total annual operating expenses less any contractual fee waivers and/or expense reimbursements by the adviser in effect through at least April 30, 2011. See current prospectus for more information.

Net and Total = The expense ratio includes acquired fund fees and expenses of 0.80% for the underlying funds.

Investment objective and strategy

The fund seeks long-term growth of capital consistent with a higher level of risk relative to the broad stock market.

Portfolio management

Invesco Aim determines the asset class allocation, underlying fund selections and target weightings. The underlying funds are actively managed by teams of investment professionals. More information on the management teams of the underlying funds may be found at invescoaim.com.

How does the fund fit into your portfolio?

- **Asset allocation.** The fund provides asset allocation in a single portfolio targeted to your risk tolerance and financial goals.
- **Diversification.** With one investment, you're diversified across asset classes, investment styles and market capitalizations.
- **Annual rebalancing.** Allocations may change as the markets move up and down, so portfolios are rebalanced annually to maintain target allocations. Rebalancing periodically re-establishes the original target allocation.
- **Investment selection.** Invesco Aim researched its broad range of mutual funds to determine which funds would best represent each asset class within the target risk portfolios. The portfolio invests in underlying AIM and AIM Trimark funds - all actively managed by teams of experienced portfolio managers.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invescoaim.com for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Returns since the Class Y shares' inception date are actual returns. All other returns are blended returns of actual Class Y share performance and restated Class A share performance (for periods prior to the inception date of Class Y shares) at NAV and reflect the Rule 12b-1 fees as well as any fee waivers or expense reimbursements applicable to Class A shares. Had fees not been waived and/or expenses reimbursed currently or in the past, returns would have been lower. Returns less than one year are cumulative; all other performance figures are annualized. Class S shares have no sales charge; therefore, performance is at NAV. Returns since the Class S shares' inception date are actual returns. All other returns are blended returns of actual Class S share performance and restated Class A share performance (for periods prior to the inception date of Class S shares) at NAV and reflect Rule 12b-1 fees as well as any fee waivers or expense reimbursements applicable to Class A shares.

Current allocations may differ.

Class Y shares are available only to certain investors. See the prospectus for more information.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

Investment maps, equity sector breakdown and capitalization breakdown do not account for holdings of AIM Balanced-Risk Allocation Fund.

Class S shares are closed to most investors. See the prospectus for more information.

The Custom Growth Allocation Index, created by Invesco Aim to serve as a benchmark for AIM Growth Allocation Fund, is composed of the following indexes: Russell 3000®, MSCI EAFE®, FTSE NAREIT Equity REITs and Barclays Capital U.S. Universal. The composition of the index may change from time to time based on the target asset allocation of the fund. Therefore, the current composition of the index does not reflect its historical composition and will likely be altered in the future to better reflect the objective of the fund. The Russell 3000 Index is a trademark/service mark of the Frank Russell Co. Russell® is a trademark of the Frank Russell Co. An investment cannot be made directly in an index.

12-month forward and trailing P/E are calculated using weighted harmonic averaging, which helps avoid extreme results that may occur due to small relative numbers in the denominator. It doesn't exclude extreme values; instead, it reduces the effect of outliers on the aggregate calculation. The **price/book ratio** is the market price of a stock divided by the book value per share.

Return on equity (ROE) is net income divided by net worth. The **three-year EPS growth rate** is a weighted average of each stock holding's growth rate in earnings per share (EPS). EPS is total earnings divided by the number of shares outstanding. The **five-year dividend growth rate** is the weighted average of each stock holding's annualized percentage rate of growth in dividend yield over five years. **Alpha** (cash adjusted) is a measure of performance on a risk-adjusted basis. **Beta** (cash adjusted) is a measure of relative risk and the slope of regression. **R-squared** (cash adjusted) expresses the proportion of variation in the return of one fund explained by the return of a benchmark. **Tracking error** measures the difference between returns of a portfolio and its benchmark index. The **up and down capture** measures how well a manager was able to replicate or improve on periods of positive benchmark returns and how severely the manager was affected by periods of

It may not be copied or distributed and is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Ratings are based on a risk-adjusted return measure that accounts for variation in a fund's monthly performance, placing more emphasis on the downward variations and rewarding consistent performance. With-load ratings include the effect of sales charges, loads and redemption fees. Load-waived ratings exclude sales charges, loads and redemption fees, and are only applicable to investors not subject to sales charges. Had fees not been waived and/or expenses reimbursed in the past, the Morningstar rating would have been lower. The overall rating is derived from a weighted average of three-, five- and 10-year rating metrics, as applicable. Ratings are as of the most recent quarter end and are subject to change every month. A fund is eligible for a Morningstar rating three years after inception. The top 10% of funds in a category receive five stars, the next 22.5% four stars, the next 35% three stars, the next 22.5% two stars and the bottom 10% one star. (Each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages.) Ratings for other share classes may differ due to different performance characteristics. Past performance does not guarantee future results.

About risk

The fund pursues its investment objectives by investing its assets in other underlying AIM funds rather than investing directly in stocks, bonds, cash or other investments. The fund's investment performance depends on the investment performance of the underlying funds. There is risk that the adviser's evaluations and assumptions regarding the fund's broad asset classes or the underlying funds may be incorrect based on actual market conditions, or that the fund will vary from the target weightings in the underlying funds due to factors such as market fluctuations. There can be no assurance that the underlying funds will achieve their investment objectives, and the performance of the underlying funds may be lower than that of the asset classes they represent. The underlying funds may change their investment objectives or policies without the approval of the funds. If that were to occur, the fund might be forced to withdraw its investments from the underlying funds at an unfavorable time. The adviser has the ability to select and substitute the underlying funds in which the fund invests and may be subject to potential conflicts of interest in selecting underlying funds because it may receive higher fees from certain underlying funds than others. However, as a fiduciary of the fund, the adviser is required to act in the fund's best interest when selecting the underlying funds. Because the fund is a fund of funds, it is subject to the risks associated with the underlying funds in which it invests. There are additional risks of investing in the underlying funds.

Portfolio turnover is greater than most funds, which may affect the fund's performance due to higher brokerage commissions. Active trading may also increase short-term gains and losses, which may result in taxable gain distributions to the fund's shareholders.

The values of convertible securities in which the fund invests may be affected by market interest rates, the risk that the issuer may default on interest or principal payments, and the value of the underlying common stock into which these securities may be converted.

The fund is subject to currency/exchange rate risk because it may buy or sell currencies other than the U.S. dollar.

The fund may use enhanced investment techniques such as derivatives. The principal risk of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Derivatives are subject to counterparty risk - the risk that the other party will not complete the transaction with the fund.

Prices of equity securities change in response to many factors, including the historical and prospective earnings of the issuer, the value of its assets, general economic conditions, interest rates, investor perceptions and market liquidity.

The fund invests in "growth" stocks, which may be more volatile than other investment styles because growth stocks are more sensitive to investor perceptions of an issuing company's growth potential.

The fund's investments in different independently managed sectors create allocation risk, which is the risk that the allocation of investments among the sectors may have a more significant effect on the fund's net asset value when one of the sectors is performing more poorly than the other(s). Active rebalancing of the fund among the sectors may result in increased transaction costs.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

There is no guarantee that the investment techniques and risk analysis used by the fund's portfolio managers will produce the desired results.

The prices of securities held by the fund may decline in response to market risks.

The fund's investments are concentrated in a comparatively narrow segment of the economy. Consequently, the fund may tend to be more volatile than other mutual funds, and the value of the fund's investments may tend to rise and fall more rapidly.

Start-up or early stage companies, such as venture capital companies, generally have limited operating histories, no present market for their technologies or products, and no history of earnings or financial services.

The fund may invest in obligations issued by agencies and instrumentalities of the U.S. government that may vary in the level of support they receive from the U.S. government. The U.S. government may choose not to provide financial support to U.S.-government-sponsored agencies or instrumentalities if it is not legally obligated to do so. In this case, if the issuer defaulted, the underlying fund holding securities of such an issuer might not be able to recover its investment from the U.S. government.

Because a large percentage of the fund's assets may be invested in securities of a limited number of companies, each investment has a greater effect on the fund's overall performance and any change in the value of those securities could significantly affect the value of an investment in the fund.

Stocks fall into three broad market capitalization categories - large, medium and small. Investing primarily in one category carries the risk that, due to current market conditions, the category may be out of favor with investors. Small and mid-sized companies may tend to be more vulnerable to adverse developments and more volatile than larger companies. Investments in small and mid-sized companies may involve special risks, including those associated with dependence on a management group; little or no operating history; little or no track record of success; and limited product lines, market and financial resources. Also, there may be less publicly available information about the issuers of the securities or less market interest in such securities than in the case of larger companies, which can each cause significant price volatility. The securities of small and mid-sized companies may be illiquid, restricted as to resale or trade less frequently and in smaller volume than more widely held securities, which may make it difficult for an underlying fund to establish or close out a position in these securities at prevailing market prices.

Individually negotiated, or over-the-counter, derivatives are subject to counterparty risk, which is the risk the other party to the contract will not fulfill its contractual obligation to complete the transaction with the fund.

The fund or the subsidiary may invest in commodity-linked derivative instruments that may be subject to greater volatility than investments in traditional securities.

The fund is indirectly exposed to the risks associated with the subsidiary's investments. The subsidiary is not registered under the 1940 Act and may not be subject to all the investor protections under the Act. Accordingly, the fund will not have all the protections offered to investors in registered investment companies.

Credit risk is the risk of loss on an investment due to deterioration of an issuer's financial health. Such deterioration may lead to the issuer's inability to honor its contractual obligation, including timely payments of interest and principal.

The value of the fund's shares may be subject to greater volatility and market and credit risk. Because a large percentage of fund assets may be invested in a limited number of holdings, a change in value of these holdings could significantly affect the value of an investment in the fund.

The fund may use enhanced investment techniques such as leverage, which entails risks such as magnifying changes in the value (both positive and negative) of the portfolio's securities.

Foreign and developing markets securities have additional risks, including exchange-rate changes, political and economic upheaval, relative lack of information, relatively low market liquidity, and potential lack of strict financial and accounting controls and standards.

Consider the investment objectives, risks, and charges and expenses carefully. For this and other information about AIM funds, obtain a prospectus from your financial adviser and read it carefully before investing.

AIM Growth Allocation Fund

Data as of Dec. 31, 2009

Performance summary

- The fund underperformed its custom style-specific benchmark for the fourth quarter. (Please see the returns table on page 1 for fund and index performance.)

Contributors to performance

- AIM International Growth Fund, AIM Balanced-Risk Allocation Fund and AIM Structured Growth Fund (12.68%, 18.30% and 7.10% of net assets, respectively) were the most significant absolute contributors to performance.
- Strategies which aided performance relative to our custom style index included AIM International Growth Fund, AIM High Yield Fund and AIM International Core Equity Fund (12.68%, 5.25% and 12.43% of net assets, respectively), reflecting a further continuation of investors' willingness to accept risk.

Detractors from performance

- There were no absolute detractors to the portfolio for the quarter.
- Relative to our custom style index, the most significant detractors were AIM Global Real Estate Fund, AIM Multi-Sector Fund and AIM Small Cap Growth Fund (5.21%, 8.75% and 7.02% of net assets, respectively).

Top absolute contributors and detractors

Contributors		Detractors	
	(%) of Total Assets		(%) of Total Assets
1. AIM International Growth Fund	12.68		
2. AIM Balanced-Risk Allocation Fund	18.30		
3. AIM Structured Growth Fund	7.10		
4. AIM International Core Equity Fund	12.43		
5. AIM Large Cap Growth Fund	6.38		

Positioning and outlook

- The fund is diversified across asset classes (stocks, bonds and commodities), investment styles (value, blend/core and growth), regions (domestic and international), market capitalizations (small, mid and large), duration and credit quality.
- While no fund can guarantee positive performance, the broad portfolio diversification provides exposure to areas of the market that may perform well in any given period. Additionally, the broad diversification attempts to limit exposure to any one area of the market that may be underperforming. Of course, diversification and asset allocation cannot guarantee a profit or protect against loss.
- We would like to caution investors against making investment decisions based on short-term performance especially in light of the historic snap back in returns for risk assets in the wake of the challenging markets of 2007 and 2008. As always, we recommend that you consult a financial adviser to discuss your individual financial program.

Opinions expressed are those of the fund's portfolio management.
