Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invescoaim.com for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Cash Reserve shares are sold without initial sales charge and are not subject to a CDSC. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. The Investor Class shares have no sales charge; therefore, performance is at NAV. Returns since the Investor Class shares' inception date are historical returns. All other returns are blended returns of historical Investor Class share performance and restated Cash Reserve share performance (for periods prior to the inception date of Investor Class shares) at NAV and reflect the Rule 12b-1 fees applicable to Cash Reserve shares. Class Y shares have no sales charge; therefore, performance is at NAV. Returns since the Class Y shares' inception date are actual returns. All other returns are blended returns of historical Class Y share performance and restated Cash Reserve share performance (for periods prior to the inception date of Class Y shares) at NAV and reflect the Rule 12b-1 fees applicable to Cash Reserve shares. Had fees not been waived and/or expenses reimbursed currently or in the past, returns would have been lower. Returns less than one year are cumulative; all other performance figures are annualized.

About risk

Credit risk is the risk of loss on an investment due to the deterioration of an issuer's financial health. Such a deterioration of financial health may result in a reduction of the credit rating of the issuer's securities and may lead to the issuer's inability to honor its contractual obligations, including making timely payment of interest and principal.

Foreign securities have additional risks, including exchange rate changes, political and economic upheaval, relative lack of information, relatively low market liquidity, and the potential lack of strict financial and accounting controls and standards.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

There is no guarantee that the investment techniques and risk analysis used by the fund's portfolio managers will produce the desired results.

The prices of securities held by the fund may decline in response to market risks.

An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corp. or any other government agency and is not a deposit or other obligation of, or guaranteed by, a depository institution. Although the fund seeks to preserve the value of your investment at \$1 per share, it is possible to lose money by investing in the fund.

The value of, payment of interest on and repayment of principal for the fund as well as the fund's ability to sell a municipal security may be affected by constitutional amendments, legislative enactments, executive orders, administrative regulations, voter initiatives and the economics of the regions where the issuers in which the fund invests are located.

If the seller of a repurchase agreement in which the fund invests defaults on its obligation or declares

About risk (continued)

bankruptcy, the fund may experience delays in selling the securities underlying the repurchase agreement.

To the extent that the fund is concentrated in securities of issuers in the banking and financial services industries, the fund's performance will depend to a greater extent on the overall condition of those industries. The value of these securities can be sensitive to changes in government regulation, interest rates and economic downturns in the U.S. and abroad.

The fund may invest in obligations issued by agencies and instrumentalities of the U.S. government that may vary in the level of support they receive from the U.S. government. The U.S. government may choose not to provide financial support to U.S.-government-sponsored agencies or instrumentalities if it is not legally obligated to do so. In this case, if the issuer defaulted, the underlying fund holding securities of such an issuer might not be able to recover its investment from the U.S. government.

Investor Class shares are closed to new investors. Investors should contact their financial advisor about other share classes.

Class Y shares are available only to certain investors. See the prospectus for more information.

The T-Bill 3-Month Index is tracked by Lipper to provide performance for the three-month U.S. Treasury Bill. An investment cannot be made directly in an index.

AIM Money Market Fund

Data as of Sept. 30, 2009

Performance summary

- AIM Money Market Fund is managed with an emphasis on fundamental credit analysis combined with a disciplined portfolio management process and structure. Money market securities are chosen in accordance with the guidelines of national rating agencies, such as Standard & Poor's, Moody's Investors Service and Fitch Ratings.
- Since the fund's introduction, the investment discipline has evolved around three key elements - safety, liquidity and yield. We believe safety is essential in the investment management process. Liquidity is important to investors who need a quick, dependable place to invest their cash. Finally, a competitive yield is important, and we strive to meet the performance needs of shareholders.

Contributors to performance

- Exposure to asset-backed commercial paper and commercial paper in general were two primary contributors.

Detractors from performance

- Overall, yield levels remain historically low and hinder total-return potential.

Positioning and outlook

- Yields may remain low for some time. On June 24, 2009, the U.S. Federal Reserve (the Fed) voted to maintain the target range of 0% to 0.25%, and the committee continues to anticipate that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for an extended period.
- We remain committed to our key investment tenets - safety, liquidity and yield. We focused on safety of principal, but remained mindful of the other two objectives: liquidity of securities and the highest possible yield.
- The fund is managed to react quickly to yield movements while the Fed continues to implement its monetary policy by setting a target for the federal funds rate.
- The majority of fund assets currently mature in less than 40 days. While instrumental in limiting interest-rate risk, this structure also offers the opportunity for reinvestment at higher interest rates as interest rates rise.
- Markets have experienced a strong recovery during 2009, which continued into the third quarter. We would like to caution investors against making investment decisions based on short-term performance. As always, we recommend that you consult a financial advisor to discuss your individual financial program.

Opinions expressed are those of the fund's portfolio management.
