

AIM Large Cap Value Portfolio

Invesco Aim Private Asset Management

Fourth Quarter

Current Portfolio Positioning

2009 was truly a tale of two markets. During the first few months of the year, equity markets steeply declined as severe problems in the credit markets and a deteriorating outlook for corporate earnings led to a global economic recession. But as the U.S. economy began to show signs of improvement, equity markets rapidly reversed direction. Starting in March, stocks rallied strongly through most of the year.

While market performance has improved, the environment is still far from normal as valuation and credit spreads remain at unusually high levels. Our investment results can be lumpy during periods like this, but historically these types of markets have yielded attractive opportunities for future capital growth.

During the fourth quarter and all of 2009, the portfolio outperformed the Russell 1000® Value Index and most peers. Drivers of performance were mainly stock specific. Select financials and information technology holdings were among the largest contributors. Select holdings in financials were among the largest detractors.

The crisis environment that characterized 2008 and part of 2009 has abated since the market's March low. This process was favorable to the portfolio and shifted investor attention to the valuation opportunities created by the crisis and exploited by our investment process. We continue to believe the valuation opportunity captured by the portfolio remains very attractive despite record appreciation since the market low. But a self-sustaining economic recovery is a necessary precondition to further normalization of equity values.

Our analysis suggested the recent market stress produced some of the most compelling valuation opportunities in history. As a consequence, our turnover was higher than normal this year as we tried to exploit that opportunity. Valuation spreads have tightened from record-wide levels, and therefore the difference between price and our estimate of portfolio value has also declined. However, despite the sharp increases in market prices, the portfolio's price-to-value ratio remains very attractive versus history, but substantially less than at recent market lows. Investors should not expect the magnitude of recent outperformance to be repeated in the next 12 months. While we think portfolio values remain very attractive, the next phase of the market recovery could prove more muted.

We believe the single most important indicator of the way the portfolio is positioned for potential future success is not our historical investment results or popular statistical measures, but rather the difference between current market prices and the portfolio's estimated intrinsic value – the aggregate business value of the portfolio based on our estimate of intrinsic value for each individual holding. At the close of the quarter, the difference between the market price and the estimated intrinsic value of the portfolio remained high versus history according to our estimation. While there is no assurance that market value will ever reflect our estimate of the portfolio's intrinsic value, we believe the large gap between price and estimated value may stack the odds in favor of above-average capital appreciation once capital markets normalize.

We continue to work hard to protect and grow the portfolio's estimated intrinsic value. We thank you for your investment and for sharing our long-term investment perspective.

Returns less than one year are not annualized.

* "Pure" gross of fees returns do not reflect the deduction of any expenses, including trading costs. "Pure" gross of fees returns are supplemental to net returns. See note 3.

Invesco Aim Private Asset Management, Inc. (IAPAM), formerly AIM Private Asset Management, Inc., has prepared and presented this report in compliance with the Global Investment Performance Standards (GIPS®).

- Invesco Aim Private Asset Management, Inc. is an independent investment adviser registered under the Investment Advisers Act of 1940 and provides investment advice for separately managed accounts. A complete list and description of composites and additional information regarding policies for calculating and reporting returns are available upon request. All returns are expressed in U.S. dollars and are gross of nonreclaimable withholding tax, if applicable.
- The Large Cap Value Tax-Exempt Composite (previously named the Large Cap Value Composite) includes all discretionary, nontaxable, fee-paying wrap accounts patterned after the AIM Large Cap Value Model Portfolio, which seeks long-term capital growth by investing in large-capitalization companies that the portfolio managers believe to be undervalued in relation to long-term earning power or other factors. The composite is managed in comparison to, not duplication of, the benchmark. The composite was created in January 2001.
- "Pure" gross-of-fees returns do not reflect the deduction of trading costs or any other expenses, and are supplemental to net returns. Performance results are presented both net and gross of total wrap fees. Net returns reflect the deduction of the maximum total wrap fee which is currently 3.00% per annum. Prior to Jan. 1, 2003, net returns reflect actual wrap fees for each account in the composite. For periods after Jan. 1, 2003, a model fee equal to the highest wrap fee a client could pay (3.00% annually as charged by the program sponsor, inclusive of up to a maximum investment advisory fee of 0.75%) is used. The total wrap fee includes all charges for trading costs, portfolio management, custody and other administrative fees. The standard wrap fee schedule currently in effect is as follows: 3.00% on total assets.
- The returns of the Russell 1000 Value Index are provided to represent the investment environment that existed during the time periods shown. For comparison purposes the index is fully invested, which includes the reinvestment of income. The returns for the index do not include any transaction costs, management fees or other costs.
- The dispersion of annual returns is measured by the asset-weighted standard deviation of account returns included in the composite for the full year. For periods with five or fewer accounts included for the entire year, dispersion is not presented as it is not considered meaningful.
- The composite return for the most recent period is an estimate and may not reflect reconciled numbers for every portfolio within the composite. The performance report for the next period will reflect the final reconciled return for the current period.

Past performance is not indicative of future results. As with any investment vehicle there is always the potential for gains as well as the possibility of losses.
