

Investment Philosophy and Process

AIM Trimark Small Companies Fund

Investment Process

Investable Universe

U.S. stocks with a market capitalization within the range of the Russell 2000 Index

Fundamental Research

- Interview managements, buyers, customers and competitors
- Determine competitive position
- Determine barriers to entry
- Determine management quality
- Ascertain capital intensity

Valuation Analysis

- Scrutinize financial statements and valuation measures
- Anticipate revenue, earnings and cash flow growth
- Build financial models
- Apply discounted-cash-flow analysis

Quality and Growth
Sustainability

Intrinsic Value
Band²

Portfolio Construction

Approximately 25-45 stocks

- Stocks with market prices below or in the low end of the valuation band
- Companies with reliable long-term growth potential, shareholder-focused management teams, sustainable competitive advantage and high barriers to entry
- Industry diversification

Investment philosophy

We view ourselves as business people buying businesses and consider the purchase of a stock as the purchase of an ownership interest in a business. Our goal is to capture investment opportunities by purchasing businesses at a market price that represents a discount to their estimated intrinsic value¹ – the value of the business based on its future cash flows, management performance and business fundamentals. We strive to develop a relatively proprietary view about a company compared with the market's focus. We believe it is only through in-depth fundamental research, including careful financial statement analysis and meetings with company management teams, that these opportunities can be found.

Also central to our investment philosophy is our adherence to a long-term view, which is typically a three- to five-year investment horizon. We use this long-term investment approach because we believe good business strategies usually take time to implement and be fully leveraged. By adhering to a long-term investment view, we give the fund's holdings time to realize their potential and provide the opportunity to be fully rewarded.

Universe definition

We define our investment opportunities as primarily U.S. stocks with the following characteristics:

- Capitalizations within the range of the Russell 2000 Index
- Sustainable competitive advantage
- High barriers to entry
- Management teams with a proven track record
- Attractive valuations relative to free cash flow

Stock selection

Stock selection entails in-depth fundamental research and valuation analysis. Our fundamental research allows us to make a determination of the viability of each company by considering its management, competitive position and future growth prospects. Valuation analysis allows us to determine the worth of the business and future return potential.

Fundamental research

In conducting a comprehensive analysis of a company, we strive to identify sustainable competitive advantages, strong growth prospects, high barriers to entry and honest and capable management teams. Part of this effort includes meeting with company management teams. Our research is intended to support or reject any thesis for investment. We believe this is the crux of our competitive advantage. We also try to learn from suppliers, customers, competitors and independent industry experts. We perform similar analysis on competitor companies. This comparative analysis provides further insight into the relative strength, sustainability and profitability of the company's business.

1 Managers believe intrinsic value represents the inherent business value of portfolio holdings during a two- to three-year investment horizon based on their estimates of future cash flow. Intrinsic value estimates are independent of market price, and, as a result, market price may never reflect intrinsic value estimates, especially for an entire portfolio.

2 The valuation band is a minimum and maximum intrinsic value estimate that we expect for the stock over the coming years based on a variety of possible scenarios.

Valuation analysis

The goal of our valuation analysis is to identify discrepancies between our estimate of a company's intrinsic value and the value being ascribed to the company's stock in the marketplace.

We closely scrutinize balance sheets, income statements and cash flow statements, with particular emphasis on valuation measures, including:

- Price-to-cash flow (P/CF) ratio
- Price-earnings (P/E) ratio
- Net asset value (strategic value)

We compare these current valuation measures to historical levels of the firm. We then input these comparisons in our valuation analysis. Other inputs come from our fundamental research, through which we anticipate a variety of revenue, earnings and cash flow growth scenarios over the next three to five years and build financial models. Output from these models is included in a discounted cash flow analysis. Next, we combine these findings with insights from our valuation measures to establish an intrinsic value estimate band for each company.

The valuation band is an estimate of minimum and maximum intrinsic value the portfolio management team expects for the stock over the coming years. It is based on the possible scenarios identified through our fundamental research and incorporated in the fund's financial modeling. A band of valuations helps us account for possible future changes in factors that are important to determining each company's true value.

Ideal candidates for the portfolio often have characteristics such as:

- Market prices either below or in the low end of the valuation band.
- Reliable growth potential over at least a three- to five-year investment horizon.
- Management teams that care about shareholders and are highly regarded by portfolio managers.

Portfolio construction

We construct portfolios of 25 to 45 stocks that are diversified across economic sectors and other risk factors. Our goal is to provide long-term growth of capital for the fund's shareholders by investing in companies with favorable long-term growth prospects that we believe are attractively priced. We follow a concentrated approach to allow each investment opportunity to materially affect the portfolio and to allow team members to maintain intimate knowledge of each company.

Risk management

While deliberate efforts are made to manage risk through industry diversification, our primary method of attempting to manage risk is to purchase businesses at what we consider the appropriate price with a margin of safety.¹ This margin of safety comes from purchasing a company at a discount to our estimate of its intrinsic value and is emphasized when that company's estimated intrinsic value is growing over time due to astute management and strong or improving business fundamentals. We are focused on managing investment risk – the risk of loss of capital in any one investment – as opposed to benchmark risk. As a result, we do not mimic a benchmark in the construction of our portfolios. The fund will often have divergent sector weightings relative to public benchmarks.

¹ Fund managers believe Benjamin Graham's concept of margin of safety, defined as the difference between market price and the estimated intrinsic value of a business, is an important measure of risk and appreciation potential. A large margin of safety helps guard against permanent capital loss and improves the probability of capital appreciation; however, a margin of safety does not prevent market loss.

Sell discipline

Holdings are considered for sale if:

- A more compelling investment opportunity exists.
- Full value of the investment is deemed to have been realized.

Holdings are also considered for sale if the original thesis for buying the company changes due to fundamental negative change in management strategy or the competitive environment.

About risk

Because a large percentage of the fund's assets may be invested in securities of a limited number of companies, each investment has a greater effect on the fund's overall performance, and any change in the value of those securities could significantly affect the value of an investment in the fund.

The values of convertible securities in which the fund invests may be affected by market interest rates, the risk that the issuer may default on interest or principal payments, and the value of the underlying common stock into which these securities may be converted.

Prices of equity securities change in response to many factors, including the historical and prospective earnings of the issuer, the value of its assets, general economic conditions, interest rates, investor perceptions and market liquidity.

Foreign securities have additional risks, including exchange rate changes, political and economic upheaval, relative lack of information, relatively low market liquidity, and the potential lack of strict financial and accounting controls and standards.

Investing in a fund that invests in smaller companies involves risks not associated with investing in more established companies, such as business risk, stock price fluctuations and illiquidity.

The prices of securities held by the fund may decline in response to market risks.

The Russell 2000® Index is an unmanaged index considered representative of small-cap stocks and is a trademark/service mark of the Frank Russell Co. Russell® is a trademark of the Frank Russell Co. An investment cannot be made directly in an index.

Diversification does not guarantee a profit or eliminate the risk of loss.

Discounted cash flow is an investment valuation method that considers the time value of money to estimate future cash flow.

Price-earnings (P/E) ratio, the most common measure of how expensive a stock is, is equal to a stock's market capitalization divided by its after-tax earnings over a 12-month period.

Price-to-cash flow (P/CF) ratio is a stock's capitalization divided by its cash for the fiscal year.

Free cash flow is the amount of cash remaining after a company has paid all expenses related to maintaining and expanding its asset base.

Net asset value (NAV) is the market value of a fund share.

On or about April 30, 2010, Invesco Aim Distributors, Inc. becomes Invesco Distributors, Inc., Invesco Aim Investment Services, Inc. becomes Invesco Investment Services, Inc., and AIM funds become Invesco funds. In addition, invescoaim.com becomes invesco.com.
